- (54) Title:** PART MOUNTING METHOD, PART MOUNTING DEVICE, AND RECORDING MEDIA

- (54) 発明の名称: 部品実装方法及び部品実装装置、並びに記録媒体

- (57) Abstract:** A part mounting method and a part mounting device capable of avoiding a trouble caused by a production operation leaving deposit on a part holding part in the production operation for part installation, wherein, when a part (3) not in a holding posture capable of mounting the part (3) normally is detected in a judgment for holding the posture of the part (3) by the part holding part (14) (#104), the part (3) is delivered to a part collecting device (23) (#112), the part (3) is not sucked at a next part removal position (15) (#113), desirably a part holding posture judging device (17) should be used to detect whether deposit is present or not on the part holding part (14) (#114), and the next part (3) is sucked (#103) after the absence of deposit is confirmed (#115) and, when deposit is observed by the detection, the part mounting device is stopped (#116) or a warning is given, the maintenance of the part holding part (14) is promoted, and the production operation is restarted (#118) after the maintenance of the part holding part (14) is performed (#117).
